Business Requirements Document (BRD)

Project Title: Remote Internship Progress Dashboard

1. Executive Summary

The Remote Internship Progress Dashboard is an internal web-based platform designed to help mentors track student performance, manage assigned tasks, and review weekly progress reports in a structured manner. The system integrates task management, report submission, and feedback into a centralized dashboard, improving transparency and productivity in remote internship programs

2. Business Objectives

- Enable efficient tracking of student tasks and progress
- Improve communication between mentors and students
- Provide structured weekly reporting system
- Reduce manual tracking effort
- Generate insights on student performance

3. Stakeholders

- **Mentors:** Monitor student progress and provide feedback
- **Students:** Complete tasks and submit weekly reports
- **Admin (Optional):** Manage users and system operations

4. Project Scope

In Scope:

- Kanban-based task management system
- Markdown-based weekly report submission
- Mentor feedback system
- Progress tracking and analytics
- User authentication system

Out of Scope:

- Mobile application (initial version)
- Offline functionality
- Integration with external systems

5. Business Requirements

5.1 User Authentication

- The system shall allow secure login/signup
- The system shall support role-based access (Mentor/Student)

5.2 Task Management (Kanban Board)

- The system shall allow creation of tasks
- The system shall allow assigning tasks to students
- The system shall allow moving tasks across stages (To Do, In Progress, Done)

5.3 Weekly Report Submission

- Students shall submit weekly reports using Markdown
- The system shall store report history
- Mentors shall be able to view submitted reports

5.4 Mentor Feedback System

- Mentors shall provide feedback on reports
- he system shall store comments and suggestions

5.5 Progress Analytics

- The system shall track completed tasks
- The system shall analyze performance trends
- The system shall display basic analytics dashboard

6. Non-Functional Requirements

- **Performance:** Fast response time
- **Scalability:** Support multiple users
- **Security:** Secure user authentication and data handling
- **Usability:** Simple and user-friendly interface
- **Availability:** High uptime

7. Non-Functional Requirements

- **Performance:** Response time should be less than 3 seconds
- **Scalability:** System should support increasing users and data
- **Security:** Secure handling of user data and queries
- **Usability:** User-friendly interface for both users and admins
- **Availability:** High system uptime and reliability

8. Business Process Flow

User Login → Task Assignment → Task Update → Report Submission→ MentorReview → Feedback → Analytics

1. User logs into the system
2. Mentor assigns tasks
3. Student updates task status
4. Student submits weekly report
5. Mentor reviews report
6. Feedback is provided
7. System updates analytics

9. Technology Considerations

- **Backend:** Python (Flask/Django)
- **Frontend:** React.js (react-kanban)
- **Database:** MongoDB / MySQL

10.Success Criteria

- Improved task tracking efficiency
- Improved task tracking efficiency
- Increased mentor-student interaction
- Better visibility of progress

11. Risks and Assumptions

Risks:

- Delay in report submissions
- Incorrect task updates by users
- Limited analytics in initial version

Assumptions:

- Users have internet access
- Users are familiar with basic web usage

12. Future Enhancements

- Email notifications
- Advanced analytics dashboard
- Role-based permissions
- Mobile application support

13. Timeline

Phase	Duration
Requirement Analysis	1 Week
Development	2–3 Weeks
Testing	1 Week
Deployment	1 Week

14. Process Flow Diagram
